Subject: Industrial Internship in the Master's Program Sustainable Energy Systems

Dear Sir or Madam,

At the Faculty of Electrical Engineering and Information Technology (ETIT) at TU Dortmund University, we offer the English-language Master's program Sustainable Energy Systems. The program is primarily aimed at international students who have completed most of their Bachelor's studies at universities outside Germany.

As part of their studies, students are specifically prepared for the requirements of the German labor market. The academic focus lies on key challenges of transforming energy systems and energy grids toward a carbon-free energy supply, increasing demand-side flexibility, and cross-sector electrification, as well as the associated electrical engineering issues.

A mandatory component of the program is a twelve-week industrial internship. This internship enables students to apply their academic knowledge in practice, gain insight into industrial processes, and establish valuable contacts within German industry.

We would be delighted if you could offer internship positions to our students within your company. By doing so, you will gain early insight into the qualifications of motivated, internationally trained young professionals in the field of sustainable energy systems and have the opportunity to get to know potential future employees.

If you have any questions or would like to discuss this further, please do not hesitate to contact us.

Yours sincerely,

Apl. Prof. Dr.-Ing. Ulf Häger
Head of the Industrial Internship Program
